

Big, healthy calves  
outside faster...

A Complete Product Range Supporting Calf Health.

We make animal nutrition and forage easy.

**NUTRITECH**  
LEADERS IN ANIMAL NUTRITION

# Nutritech Calf Range

## DanCalf® Gold 3KG / 7.5KG / 25KG

- Nutrition supplement to grow big healthy calves, with great immune function
- Each dose provides 8 minerals, 11 vitamins, 2 probiotics (includes ProTernative® Milk) and a prebiotic, and optional Bovatec® for coccidiosis prevention. Note: Bovatec® is not to be fed to bobby calves
- 5 g dose/calf/day
- Add to milk for first 30 to 40 days
- 7.5 kg bucket treats 50 calves for 30 days

## ProTernative® Milk 3KG / 7.5KG / 25KG

- Live yeast probiotic designed to support gut health, immunity and growth performance in pre-weaned calves
- Specifically formulated for use in milk and milk replacers
- Helps young animals better handle digestive challenges, reducing the impact of scours, especially during high-risk periods from birth to weaning
- 5 g dose/calf/day
- Add to milk for first 30 to 40 days (or longer if required)
- 7.5 kg bucket treats 50 calves for 30 days

## Eazybed® Dry 25KG

- Bedding conditioner – a method of positive bacteria exclusion fermentation (putting good bacteria in to populate the environment so 'bad' bacteria can't thrive, while also keeping bedding dry)
- Reduces ammonia, and supports drier bedding
- Can be used on any bedding surface (including compost barns, woodchip, shavings, etc)
- 100 g/calf/week (or 50 g/ 1 m<sup>2</sup>)
- Dust on top of bedding (OK to add with calves in pens)
- 25 kg bag treats bedding for 250 calves for one week, or 500 m<sup>2</sup> for one week

## NutriCare® Colostrum Keeper 2KG / 25KG

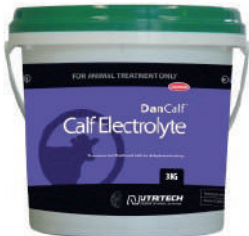

- Retains quality for 12 weeks, without refrigeration
- Can use on colostrum, whole milk and antibiotic milk
- Ensure not to over stir milk
- Add 1 g per litre of milk
- 2 kg pack treats 2000 L of milk

# Nutritech Calf Range

## DanCalf<sup>®</sup> Electrolyte 3KG / 8KG / 20KG

- Comprehensive oral rehydration solution to rehydrate calves
- Contains the correct balance of sodium, potassium and chloride together with appropriate alkalisng agents, dextrose and glycine – levels backed by the most recent calf research
- Reduces negative effects to milk clotting observed in many other electrolytes
- Mix 40 g into 1 L of water
- Feed 1- 2 L of electrolyte solution per calf
- 3 kg pack makes 75 L of electrolyte

## Coccistop<sup>®</sup> 1KG / 25KG

- Add to milk or meal for coccidiosis prevention or treatment
- Not to be fed to bobby calves
- Dosage based off body weight, 10 mg/kg liveweight e.g. 60 kg calf = 0.6 g/calf/day (treatment dose) or 0.3 g/calf/day (prevention dose)
- Dosing regimen on label and tech sheet available

## Levucell<sup>®</sup> SC 25KG bag (salt or lime carrier)

- Rumen specific live yeast, put on a carrier to help with even application when top dressing calf feed
- Live yeast – supports rumen pH, fibre digestibility, and feed efficiency (improved growth rates in calves)
- NZ research shows improved feed intake and weight gain before, during and after weaning
- 8 g dose / calf / day (salt carrier)
- 25 kg bag treats 50 calves for 62 days
- Range of products available to continue offering as growing heifer and mature cow
